Why a Cord & Wire Cut-Out Tool?

The auto glass in today's modern vehicles have tighter tolerances between the glass and the body. It is becoming quite impossible on

some vehicles to avoid damage to the pinchweld when removing the glass. Many technicians have started using cut-out wire or cord in an effort to save the pinchweld from possible damage. This will save valuable time in priming and

will prevent rust from forming on missed areas of damage.

Also, cord /wire removal tools reduce physical strain on technician's body compared to other removal tools.

Cord is for close fitting and difficult auto glass removals. It ensures no paintwork damage around glass and vehicle bodywork. Most cords can be re-used several times.

Square wire is the strongest and provides the least resistance.

Braided wire cuts with a sawing action.

SWIFTCUTPRO® is made from synthetics and has a higher tensile strength than steel wire. It is gentle for the car body and will cut through the toughest glues. The cord is coated for identification and lubrication, which results in a long lasting wire and many removals. It doesn't stain, corrode or rust. SWIFTCUTPRO® is compatible with most of the wire-based removal tools available on the market and can be used in a wide variety of cutting jobs. From regular cars to utility vehicles, trucks, busses and even trains and planes.
